

Difficulties, Errors, or Mistakes: Mapping method and finding relationships between tables were the errors that were very difficult to solve.

Root Cause: cause by error creating bean with name.....

What did you learn from these issues?

I learned how to figure out the issues and how the small errors can freaking the whole work.

References:

Movie and VideoGame entities in ManyToMany and JoinColumn: it was hard to me finding join column name and reference column name.

In the Movie and VideoGame service also, I got errors in Auto wired.

Areas for Improvement: I improved my skills on finding relationships between tables.

Areas of Accomplishment: After 26 hours to figure out the errors and mistakes I did, I was able to create my tables.

What is your favorite thing you learned this week? debuggging was my favorite thing I learned this week. It really helps me to fix plenty of errors or mistakes.
